FOR IMMEDIATE RELEASE

Tampa, 21/08/2023

Cypherix announces the new release 17.0.2 of Cryptainer Enterprise encryption software. Version 17.0.2 contains several major enhancements including: Added Shred External option that allows you to securely delete the originals files, after copying them into Cryptainer vault. Significant UI improvements. The detailed list of new features is available on the Cypherix website.

Cryptainer creates encrypted disk drives within which all confidential files, folders, any type of data can be stored. It creates encrypted volume files that can be loaded and unloaded to appear as drives on Windows. These virtual drives store the user's sensitive information in encrypted form. Moreover, all applications can seamlessly store and use files on these drives. Once unloaded, the data is rendered totally inaccessible by anyone but the person with the key. All data is encrypted at an astonishing speed, despite the high bit strength.

Cryptainer Enterprise also allows the user to send encrypted files by email in its own special SITW file type. The recipient need not even have a copy of the program installed to decrypt the files. The program can also encrypt files directly on any media, including removable ones (USB drives, flash drives). Cryptainer has the flexibility to store and port data on an external drive. The sensitive data can be stored within an encrypted volume file that can only be accessed through the Cryptainer program and user password. Save Encrypted Vaults to Cloud Storage Providers.

Cryptainer Enterprise has all the functionality of Cryptainer, plus an additional administrative module for password recovery. The end-user interface is identical to that of Cypherix products, the award winning, easy-to-use encryption software. Extra Protection Using License Key feature embeds your license key into the vault. This way Cryptainer Enterprise installs with the same license key can open the vault. Other Cryptainer installs will not be able to access your data even with the password. Easy to Deploy, Install & Use. A must have for every business.

Cryptainer Enterprise runs on all 32-bit & 64-bit versions of Windows including Windows 11, Windows 10. Cryptainer is available in different languages including English, Dutch, German, Spanish, Italian, French, Chinese and Japanese.
