FOR IMMEDIATE RELEASE

Mississauga, 03/04/2024 – There are so many issues happening in today's business environment. Maybe your IT team needs to manage the endless devices being used by a large corporation, or you have to ensure reliable backups so there is little to no downtime. Whatever the reason, having an automated system to maintain your disk integrity is crucial to success.

Active@ Disk Image 24 can make a full copy of any PC disk. This includes working form factors and storage devices like HDDs, SSDs, USBs, CDs, DVDs, and Blu-ray discs. These backups ensure you always have a restoration spot to maintain your business operations.

When you choose Active@ Disk Image 24, you benefit from enhanced security measures. The latest version has many boosted features, including added support for BitLocker encrypted volumes, which maintains the sensitivity and security of your essential files.

This streamlined tool can be actively deployed across a wealth of systems and networks. The incremental images reduce the backup time and size required for each instance. Such improvements keep your team on schedule and help support workers at all internal levels of your organization.

The user interface and console on Active@ Disk Image 24 are customizable to your unique needs. The recovery and backup processes are easy to use, as you are guided through a step-by-step process using a wizard interface. This is especially beneficial if you are unfamiliar with the unique Dell, HP, and Lenovo systems.

Considering how many businesses suffer from data leaks and intrusive external threats, you want a comprehensive backup of your crucial business data, from customer information about a recent sale to compliance documents with your local regulatory body. Using Active@ Disk Image 24 is an exceptional way to keep your business on track and on time. Download the package by visiting https://www.lsoft.net/disk-image/ and see what this tool can do for your company.
