FOR IMMEDIATE RELEASE

Charlotte, 16/08/2023

If you're searching for a hassle-free way to export Power BI reports and visuals to Excel, look no further than PBRS (Power BI Reports Scheduler). This incredible tool automates and streamlines Power BI exports, allowing users to schedule and export reports and visuals as Excel or CSV files within minutes. With PBRS, you can maximize the potential of your Power BI data in Excel format, freeing up valuable time and energy for more important tasks. Discover the ultimate solution for effortless Power BI exports with PBRS.

If you're looking to effortlessly share your Power BI insights in a format that everyone is familiar with, PBRS (https://go.christiansteven.com/power-bi-report-scheduler) is the perfect solution. With PBRS, users can export the summary or underlying data from Power BI into an Excel spreadsheet, while maintaining the same formatting. This ensures that the data retains its original structure and appearance, making it easy for recipients to comprehend and manipulate the information they receive.

PBRS provides a range of powerful features for exporting Power BI data to Excel files. Users can enhance their data analysis by adding row and column totals to the exported data, making it simpler for recipients to comprehend and gain insights from the information. With PBRS, users can effortlessly unlock valuable insights from their data, saving time and improving efficiency.

An additional impressive capability is the option to export data from various Power BI visuals into distinct tabs within a single Excel workbook. This functionality enables users to efficiently organize and merge data from diverse sources into one convenient Excel file, which proves highly advantageous for effective data analysis and streamlined reporting purposes.

PBRS simplifies the process of sharing exported data with others. Users have the flexibility to email the exported files as Excel attachments and can choose the number of visuals to include in each email. Whether you prefer sending one attachment per email or multiple attachments in one email, PBRS has got you covered. This ensures that the data reaches the intended recipients quickly and seamlessly. Moreover, users can also deliver their Excel and CSV exports to various platforms such as local or network folders, FTP, Dropbox, Google Drive, Google Sheets, OneDrive, Teams, Slack, Amazon AWS, or even print them out to selected printers. PBRS offers a multitude of options for effortlessly sharing your data exports.

With PBRS, users can automate Power BI reports to Excel in a few clicks. Simply schedule the exports and choose the desired dates and times for automatic exporting. Say goodbye to manual work and outdated data – PBRS ensures that your Excel files always contain the most up-to-date information. Experience the ease and efficiency of exporting Power BI reports to Excel with PBRS.
