

## FOR IMMEDIATE RELEASE

Moscow, 09/01/2024: Human resources is a complex world of insurance forms, calendars, and hiring/firing practices. Couple that with the demanding restrictions of how information is relayed in government agencies, you have a formula for safeguarding sensitive information on various documents. However, what do you do when that demand conflicts with the urgency of access?

Advanced Office Password Recovery is an all-in-one solution for accessing password-protected documents, from employee contracts to confidential reports. Imagine having to dig through hundreds of protected files during a significant employee turnover or needing to regain access to classified documents for media inquiries or oversight. This tool cuts through the bureaucratic red tape by unlocking access to these files using an array of attacks, from dictionaries to advanced “human factor” algorithms.

We live in an era where time sensitivity is a must. Activities like legal criminal cases or needing to transfer background information on an employee to a satellite office all require careful encryption. When those files become unavailable to those who need them, every minute counts.

Advanced Office Password Recovery guarantees recovery in a shortened timeframe for Corel WordPerfect Office files, Microsoft files from Office 97 to Office 365, and even the IBM Lotus suite of files. No document is “too old” or “obscure” for this software to work.

Advanced Office Password Recovery works with all the supportive documentation you wish to include about your organization or the user. That amplifies the ability to “crack” the password through intuitive software that learns through a scalable dictionary, mask, combination, or hybrid attack. The team behind the software even patented a new Thunder Tables Technology that significantly speeds up the recovery of 40-bit keys for Word files.

When your government agency needs to access information about a new public initiative or your HR department has to verify legacy documents about specific employees, you don’t want to be restricted by unwanted downtime. Save you and your team the hassle and use a leading tool for getting around password-protected files. Download a copy of Advanced Office Password Recovery today at <https://www.elcomsoft.com/aopr.html> and experience the efficiency and accessibility it brings to your team.
