

## FOR IMMEDIATE RELEASE

Mississauga, 15/01/2024 - In today's highly competitive world, where data-driven insights make or break a business, a reliable way to recover your essential information from an accident is critical. From running a small donut shop in your town to managing law enforcement evidence on remote laptops to ensuring your non-profit never loses essential lists of donors, Active@ UNFORMAT 23 offers cutting-edge and reliable solutions to these challenges.

For small business owners, every byte of data can signify hours of hard work. A missing report or a lost client database isn't just an inconvenience. Without that info, your business can experience a potential hit to its bottom line. Similarly, law enforcement agencies rely on data for operations, investigations, and more to secure an arrest and close a case. An accidentally deleted file can mean the difference between solving a crime and hitting a dead end.

That's where Active@ UNFORMAT 23 steps in. It's not just another recovery software. It's a commitment to ensuring businesses and organizations never have to face the harrowing scenario of lost data. Whether it is retrieving deleted files from a disk, restoring damaged partitions, or recovering information post-formatting, Active@ UNFORMAT 23 has got you covered.

Apart from its core functionalities, what differentiates Active@ UNFORMAT 23 is its proactive approach to data recovery. Recent updates have led to improved NTFS recovery for volumes with large cluster sizes, ensuring an even more robust performance. Moreover, the software now incorporates the latest Disk Editor 23 and an upgraded Active@ Boot Disk based on Windows 11 22H2 - making data recovery smoother and more intuitive than ever before.

For businesses and organizations looking to future-proof their operations, Active@ UNFORMAT 23 also offers advanced scan methods to detect all lost partitions, and the user interface is so well-designed that even those not tech-savvy can easily navigate it. You can load the interface from any USB, CD, or DVD disk - giving your team access to non-bootable PCs using local tools.

In our rapidly evolving digital landscape, the stakes for data security and recovery have never been higher. Small businesses form the backbone of our economy, while law enforcement agencies work tirelessly to keep us safe. Both deserve a tool that respects the importance of their data. That tool is Active@ UNFORMAT 23. It's time to boost your team's

data recovery skills, even when reformatting is essential.
